

VENKATA KIRAN YALAMARTHI

Environmental Systems Engineer · Software Implementation · SQL / REST APIs · React / Python · Agile · Data Analytics

Detroit, MI | (201) 744-3396 | kiranyalamarthi07@gmail.com | [Linkedin](#)

PROFESSIONAL SUMMARY

Environmental Systems Engineer with 5+ years of experience in software implementation and systems engineering — developing and documenting system requirements; executing rapid development of data and analytic work tracks with fast iteration over quick sprints; breaking down business problems into solvable components; developing proof-of-concept designs; leveraging agile software engineering for systems implementation; working with REST APIs and data formats including JSON; designing SQL queries and stored procedures; and building cross-functional relationships with key stakeholders at General Motors. Experienced with full-stack development concepts using Python, React, SQL, and REST APIs; familiar with JavaScript frameworks; proficient in M.S. Analytics (GPA 3.8) providing strong data analytics foundation; works across business functions to build consensus; communicates effectively to technical and non-technical audiences; valid driver's license; open to 30% travel.

PROFESSIONAL EXPERIENCE

Environmental Systems Engineer – Software Implementation & Analytics · General Motors Michigan Mar 2025 – Present

- **Developed and documented system requirements; broke down business problems into solvable components** — providing support to develop and document system requirements; breaking down business problems into solvable components by assessing requirements and business implications to arrive at recommended solutions with minimal supervision; working with subject matter experts and business partners on cross-functional teams.
- **Executed rapid development of data and analytic work tracks with fast iteration over quick sprints** — executing rapid development of new data and analytic work tracks using Agile methodology with fast iteration over quick sprints; developing new concepts and proof-of-concept designs; participating in development of project-based research data files and information platforms for exploring and understanding data.
- **Designed SQL queries and REST APIs; supported software integrations between enterprise systems** — designing SQL queries and stored procedures for data retrieval and transformation; writing and working with RESTful APIs and data formats including JSON and XML; supporting software integrations between complex enterprise systems; developing data pipeline solutions connecting systems and enabling data flow.
- **Built frontend components using React; developed data analysis solutions** — developing React-based frontend components for data visualization and user interface; utilizing multidisciplinary approach combining technical expertise with analytics and business knowledge; developing prototypes for business or research data solutions so users could visually understand and explore new features before implementation.
- **Promoted innovation and process improvement; communicated to technical and non-technical audiences** — promoting an environment that supported innovation and process improvement; demonstrating high degree of analytic agility to meet fluid and dynamic business needs; leveraging Agile software engineering for systems implementation; communicating effectively to both technical and non-technical audiences across the SDLC.

Systems Engineer – Software Implementation & Data Analytics · People Tech Group Inc. Hyderabad, India Apr 2020 – Jul 2023

- **Implemented software systems; developed data analytics; supported cross-functional stakeholders** — developing and documenting system requirements; executing Agile rapid development data and analytic work tracks; designing SQL queries and REST APIs; building React frontend components; developing proof-of-concept designs; working with subject matter experts on cross-functional teams; communicating to technical and non-technical audiences; driving innovation and process improvement.

TECHNICAL SKILLS

Software Impl.:	System requirements development, COTS and custom software implementation, Agile sprints, PoC design
Backend / APIs:	Python (strong), REST APIs (strong), JSON/XML, SQL (strong); stored procedures; enterprise system integrations
Frontend:	React (familiar), JavaScript (familiar), HTML5 (familiar); data visualization and UI component development
Data Analytics:	M.S. Analytics GPA 3.8; Python data analysis, dimensional models, research data platforms, analytic agility
Agile / SDLC:	Agile methodology (strong), rapid iteration, sprint-based development; detailed SDLC knowledge
Stakeholder Mgmt:	Cross-functional team collaboration, consensus building, technical and non-technical communication
Quality / EHS&S:	Quality management systems awareness; process compliance documentation; data-driven quality metrics
Other:	Git/GitHub, Docker, Jira, Confluence; valid driver's license; 30% travel available; remote/virtual collaboration

EDUCATION

M.S. in Business Analytics · GPA 3.8 · Data Analytics, ML & Systems

Aug 2023 – Dec 2024

Adelphi University, New York, USA · Satisfies Master's degree plus qualification

CORE COMPETENCIES

System Requirements Development & Documentation · Agile Rapid Development & Sprint Iteration · Business Problem Decomposition · SQL Query & Stored Procedure Design · REST API Development (JSON/XML) · React / JavaScript Frontend · Enterprise System Integration · Research Data Platform Development · Cross-Functional Stakeholder Collaboration · Technical & Non-Technical Communication
